Ontario Hydro Statistical Yearbook

THE CORPORATION

ONTARIO HYDRO was created in 1906 by a special statute of the Province of Ontario. We are a financially self-sustaining corporation without share capital. Bonds and notes issued by the corporation are guaranteed by the Province.

Ontario Hydro serves the people of the province by supplying reasonably-priced and reliable electricity. We also help meet our customers' broader energy needs by providing comprehensive information about energy conservation. Ontario Hydro is developing innovative programs to better manage energy consumption, and offering financial incentives for greater energy efficiency.

Under the Power Corporation Act, it is our responsibility to generate, supply and deliver electricity throughout Ontario as well as to provide energy conservation programs. We also produce and sell steam and hot water as primary products. We work with and regulate municipal utilities. In co-operation with the Canadian Standards Association, we are responsible for the inspection and approval of electrical equipment and wiring throughout Ontario. We sell electricity to 314 municipal utilities, which then sell this power to customers in their service area. We also directly serve more than 100 large industrial customers and 918,368 small business, residential, and farm customers in rural and remote areas. In 1990, 3,654,253 customers were served by Ontario Hydro and the municipal utilities.

Ontario Hydro operates 81 hydro-electric, fossil-fuelled, and nuclear generating stations and an extensive transmission and distribution system across the province.

The Corporation is governed by a Board of Directors. The Board can have up to 17 members, 16 of whom are appointed by the Lieutenant-Governor-in-Council of Ontario. The President and Chief Executive Officer, also a Board member, is a full-time employee of Ontario Hydro and appointed by the Board.

Ontario Hydro's head office is located at 700 University Avenue, Toronto, Ontario. For administrative and operational purposes, six regional and 45 area offices are maintained throughout the province.

POWER RESOURCES AND REQUIREMENTS

The analysis on page 5 of energy made available by Ontario Hydro shows for the total system, the energy obtained from each major source in 1989 and 1990 and the related percentage changes in 1990. The table also shows the primary and secondary energy supplied in each year together with the percentage changes in 1990.

The table of In-Service Dependable Capacity and Primary Demand on page 5 shows the primary peak demand for the month of December and the in-service dependable peak capacity of resources at that time. A separate table on pages 6 and 7 gives the in-service dependable peak capacity of major Ontario Hydro generating stations and contract firm power purchases at the time of the December system peak. Any comparison of total primary peak demand and resources should make allowance for the part of total primary demand that may be interrupted under contracts accepted by the customer. In 1990 this interruptible load over the December peak was approximately 329 megawatts.

The in-service dependable peak capacity of a hydraulic generation station is the estimated output that an analysis of stream-flow conditions indicates the station is capable of producing 98 percent of the time. It can be expected to exceed this output in 49 out of 50 years. Since the stations so rated are distributed on many widely separated watersheds and since all would not be simultaneously affected by stream flows, the amount by which the total hydro-electric generating capacity of the system exceeds the sum of various station capacities represents the diversity in stream flow within the system.

The in-service dependable peak capacity of a thermal generating station is the net peaking capacity of its fully commissioned units minus capacity which is mothballed or frozen.

The capacities shown are those available for a 20-minute period at the time of the System Primary Peak Demand in December, the capacity of the purchased power sources being based on the terms of the purchased contract. The Primary Peak Demand shown is the maximum peak for December. Some part of the System Primary Demand is subject to interruption in accordance with contract terms accepted by the customer. The total load subject to such interruptions at the time of the December peak is 329 MW.

NOTES TO STATEMENTS OF THE ALLOCATION OF THE AMOUNTS CHARGED FOR PRIMARY POWER

1. The common demand functions performed in the production and supply of power, which are listed below are considered to be used by all customers in relation to demand requirements and are allocated to the customer classes based on costing load as follows:

	Municipal Utilities	Rural Retail Customers	Direct Industrial Customers
	\$/kW	\$/kW	\$/kW
Power Supply-Demand	130.23	130.20	130.20

The demand charge is the per kilowatt charge for primary, exclusive of energy cost.

2. The portion of the amount charged for primary power attributable to producing energy, rather than meeting demand requirements, has been classified as energy charge. For allocation purposes, this charge has been established at 25.28 Mills per kWh.
3. Customer Administration charges are those associated with customer service activities and interest costs, associated with the supply of bulk power, that can be specifically identified with municipal utilities, the rural retail customer class or the direct industrial customer class.
4. Transformation charges are those associated with transformation stations that step down from above to below 50 kV.
5. Power District Distribution Stations charges are those associated with low voltage distribution stations that exclusively serve the power district and those that are shared between the power district and one or more municipal distributors.
6. Municipal Distributors' Specific Distribution Stations charges are those associated with low voltage distribution that exclusively serve municipal distributors.
7. Distribution Lines' charges are those associated with segments of low voltage lines that exclusively serve an individual and lie within its boundary.
8. Sundry charges are those associated with rate discounts and contract adjustments to customers for special service conditions
- a) Included in the total amount charged for primary power to municipalities is a discount applied to the following municipalities for taking power at the 230 kV voltage level:

<u>Municipality</u>	<u>\$'000</u>
Hamilton	398
Kitchener	8
Markham	657
Vaughan	479
Waterloo—Wellesley—Woolwich	386
Whitby	11
	<u>1,939</u>

- b) Included in the total amount charged for primary power is a diversity credit given to the following municipalities who have large users:

<u>Municipality</u>	<u>\$'000</u>
Barrie	(129)
Brampton	(452)
Cambridge	(121)

9. The withdrawal from stabilization of rates and contingencies for 1990 as shown on the Statement of Operations consists of:

	<u>\$'000</u>
Common Function	(226,347)
Non-Common Function	(15,419)
Rural Retail Distribution Function	(7,928)
Surplus (deficit) of	
Rural Retail Customers	1,522
Direct Industrial Customers	3,512

	<u>(244,532)</u>

10. The Distributing companies served by Ontario Hydro are costed with secondary revenue and therefore excluded from this Summary. For 1990 financial statement purposes, these distributing companies were treated as Municipal Utilities. Accordingly, the revenue and energy figures reported for Municipal Utilities in the 1990 Financial Statements are higher than those reported in this Summary.

11.	<u>\$'000</u>
Gross Rural Retail Distribution Charges Allocated	411,295

12. The delivered demand loads (billed Loads) for 1990 are:

Municipal Utilities	14,402,510 kW
Rural Retail Customers	3,411,214 kW
Direct Industrial Customers	2,775,483 kW

MUNICIPAL ELECTRIC SERVICE

The 314 municipal electric utilities, collectively, are the major distributors of power to the ultimate retail customers. Some appreciation of their combined operations and growth can be gained from the following statistics:

	<u>1990</u>	<u>1989</u>	<u>Increase %</u>
Plant and Facilities (at cost) (Millions of dollars)	4,899	4,426	10.7
Customers (000's)	2,736	2,683	2.0

Annual kW.h per Customer	36,620	33,325	(2.5)
Number of Utilities	314	315	

The decrease in energy use of 0.1% compares with an increase 4.9% in 1989; the overall increase in revenue from the sale of power and energy was \$305 million or 6.3% over that received in 1989. Revenue from other sources increased by \$11 million or 9.3%. The revenue for each class of service for the years 1989 and 1990 is compared below:

Class of Service (Includes prorated adjustment for unbilled revenue and prior years' billing adjustment)	<u>1990</u> <u>(\$000,000)</u>	<u>1989</u> <u>(\$000,000)</u>	<u>Increase</u> <u>%</u>

Net income was \$284 million compared to \$225 million in 1989.

The sources of funds for the municipal electric utilities totalled \$630 million. This was comprised of \$447 million from operations; \$45 million from borrowing; \$113 million through contributions in aid of construction; \$8 million from extraordinary items; and a net increase in other liabilities less other assets of \$17 million. Additions to fixed assets amounted to \$511 million and the redemption of debt amounted to \$25 million. Net statement of equity changes amounted to \$2 million. Working capital increased by \$69 million.

The total assets of the 314 municipal electrical utilities at December 31, 1990 amounted to \$7,325 million after deducting accumulated depreciation of \$1,657 million. Included in these assets is the equity of the utilities in the assets of Ontario Hydro in the amount of \$2,718 million or 37% of their total assets. This represents the accumulation of charges in the cost of power for the repayment of Ontario Hydro's long-term debt. These amounts would correspond to those reported in the Statement of Accumulated Equities if these were available when the utilities close their books. As this is not possible, the equities stated are those at the end of 1989 rather than 1990. The number of utilities decreased by 1 during 1990.

The books of account, from which the foregoing information is derived, are kept by the utilities in accordance with a standard accounting system designed by Ontario Hydro for use by all municipal electric utilities. These records are periodically inspected by the Corporation's municipal accountants. From time to time, adjustments and improvements in accounting procedures and office practices are recommended. By providing this type of assistance and supervision, Ontario Hydro seeks to ensure the correct application of rates and standard procedures and the observance of a uniform classification of revenues and expenditures. The work performed by the Corporation's municipal accountants does not, however, constitute an audit of their accounts; that function is performed by the duly appointed auditor of each municipality.

STATEMENT "D"

Statement D records use of energy, revenue, number of customers, average use per customer, and average revenue per kilowatt-hour for each of the main classes of service for all the municipal electrical utilities supplied under cost contracts with Ontario Hydro. The number of customers shown is that at the end of the year under review, but the calculation of monthly energy use per customer is based on the average of the numbers served at the end of the year under review and the preceding year. This is not applicable for restructured utilities. The revenue and use of energy for house heating and the use of flat-rate water heaters are included in the total shown, the flat-rate water-heater kilowatt-hours being estimated on the basis of 16.8 hours' use per day.

The average revenue per kilowatt-hour is the average paid by the customer, that is, average revenue per kilowatt-hour received by the utility. Such a statistical average does not represent the utility's actual revenue from delivering one kilowatt-hour. However, a comparison of this average over a number of years gives some indication of the trend of revenue in any one municipality, and the general trend may be seen in the table on page 42.

The general service class includes data on both industrial and commercial customers.

Information on monthly rates and comparative bills is published separately from this publication. Readers who require this information may obtain it by request to the Municipal and Industrial Service Department of the Regions Branch, at the Ontario Hydro Head Office, Toronto.

RETAIL CUSTOMERS

Ontario Hydro's Retail System provides service to approximately 918,000 customers with loads under 5,000 kW not served by municipalities or private power companies. This business is comparable in scope to that of a municipal utility. Service to retail customers, including residential, farm, and general service customers is administered through five regional offices, 45 area offices and the Retail Customer Division at head office. The various classes of service are described below.

Residential Service

Residential service is provided to single unit dwellings used only for living accommodation. It includes two classes of service—year-round and seasonal.

Year-Round Residential service is provided to dwellings considered to be customers' permanent residences. Individually metered dwelling units or bulk metered residential buildings of up to four dwelling units qualify. There are two classifications of year-round service for rate purposes. Class R1 service covers designated zones of high customer concentration where there are at least 100 customers in a group with a density of not less than 15 customers per kilometre of line, and class R2 covering normal customer densities.

Seasonal Residential service is provided to any single unit residential dwelling which is not regarded as the customer's permanent residence and is occupied intermittently throughout the year or part of it. As with the year-round residential service, there are two classifications of seasonal residential service for rate purposes, designated R3 and R4 for zones of high and normal customer densities respectively.

Farm Service

The Farm class includes single-phase or three-phase electrical service to the farm residence and to all buildings and equipment actively engaged in the production and processing of farm products. For purposes of classification, a farm can include a year round residence as well as a business as long as the service to the year round residence is supplied through the same meter as the service to the business. The business, which is agricultural production on a continuing basis, must be carried on at such a level as to ensure that the farm is a viable economic unit.

The term "agricultural production," as used here, includes the work of cultivating soil, producing crops and raising livestock, as well as operations in nurseries, fur farms, hatcheries and egg production. Properties devoted solely to raising pets, reforestation projects, the raising of Christmas trees, or having extensive acreage but not engaged in agricultural production are not classified as farms.

General Service

The General service class includes service to all businesses, excluding those that fall within the Farm class and includes bulk metered residential buildings of more than four dwelling units. Customers may receive either single-phase or three-phase electrical service at secondary, rural primary, sub-transmission, or transmission voltage.

* The monthly use per customer has been adjusted to reflect the transfer of customers to restructured municipal utilities.

DIRECT CUSTOMERS

These customers each have a demand exceeding 5000 kW and are served directly under individual contracts with Ontario Hydro. Most are located outside the service areas of municipal utilities. Where Ontario Hydro provides service to a direct customer located within the distribution area of a municipal utility, this is done only with the agreement of the utility. At the end of 1990, Ontario Hydro provided primary power to 117 direct customers.
